

Vehicle Communication Module (VCM) Wireless LAN Module for Integrated Diagnostic System (IDS)

The capability to add Wi-Fi was included in the design when VCM was developed in 2003. In recent surveys one of the top items requested was wireless connectivity for VCM. Based on this input, we developed the new VCM Wireless LAN Module.

The new module will allow wireless connectivity between the VCM and a laptop. The two devices can be wirelessly linked together directly or by using a wireless access point. Wireless capability is even available if your shop hasn't installed a wireless network.

The VCM Wireless LAN Module was piloted with a number of dealers, and they love the new technology.

"I love the VCM Wireless LAN Module — it's fantastic! It makes IDS much more portable and it's much more user-friendly. Wireless access gives the tech the freedom to move around the vehicle; there are no more cables to tangle. It also provides the freedom to work with the laptop on its docking station. It's a definite must for every IDS user."
